DOI: 10.1515/9783110499056-030

The chapter on giraffe given by Conrad Gessner in his *Historia animalium*<sup>1</sup> is an important step in the long-term history of this animal, from Antiquity to pre-modern times.<sup>2</sup> The aim of this paper is not to give an in-depth review of Gessner's chapter on the giraffe, but it will stress three topics: the specific problem of the presence of the giraffe in the Bible; some aspects of Gessner's textual sources, with a special focus on medieval authors, and the illustrations of the giraffe in the printed editions of Gessner's *Historia animalium*.

## The history of the Giraffe before Gessner's time

First, I will set forth some quick facts about the history of giraffes.<sup>3</sup> Giraffes (named *camelopardalis* in Greek and Latin) were quite well known in Antiquity, and the animal was shown rather frequently in Rome.<sup>4</sup> After the fall of the Roman Empire, the giraffe will be kept unknown for centuries in Western Europe, as very few specimens were brought in medieval menageries, 6 or 7 maximum in Spain and Italy, in the 13<sup>th</sup> and the 15<sup>th</sup> Century, according to known attested sources.<sup>5</sup> Generally speaking, written sources about this animal are quite rare in the Middle Ages. The best descriptions are given by Antique Greek texts, but these sources will be unknown in Western Europe until the first half of the 15<sup>th</sup> Century. Medieval Latin authors could rely only on the very bad description given by Pliny, who does not mention his height and the length of his neck!<sup>6</sup>

The arrival of the animal in Italy in the 13<sup>th</sup> Century will create the name "giraffa", built on the Arabic *zarāfa*, "giraffe". In this century, Thomas of Cantimpré, Vincent of Beauvais and Albertus Magnus give some pretty good descriptions of the giant beast. But they were not able to identify this new animal, the *zarāfa-giraffa*, with the *camelopardalis*, because of the absence of the long neck in Pliny's *Historia naturalis*. Medieval compilations and transformations of the Arabic zoonym will [558] bequeath in the transmission of natural history different names for one animal: *camelopardalis* (the Antique name), *anabulla* (corruption of *nabun* in Pliny's description), *orafus* or *orasius* (transformation

<sup>1</sup> Gessner (1551), p. 160–162.

<sup>2</sup> For a general survey of the history of the giraffe in the Middle Ages, see Buquet (2012).

<sup>3</sup> I am currently writing a book on this topic, from Antiquity to Modern times.

<sup>4</sup> Gatier (1996); Gatier (2005).

<sup>6</sup> Pliny (1940), p. 52 (*Historia naturalis* VIII, 27, 69).

of the Arabic *zarāfa*) and *seraffa* (Albertus Magnus) and finally *giraffa* from the end of the 13<sup>th</sup> Century.<sup>7</sup>

The identification of the contemporary true *giraffe* to the antique *camelopardalis* is explained towards the end of the 15<sup>th</sup> Century. Before this time, only one medieval scholar, Pierre Bersuire, in the 14<sup>th</sup> Century, had given the synonymy between the two zoonyms (*Camelopardalis... Et istud animal vulgariter dicitur ieraffa*), but without justifying it.<sup>8</sup> In 1487, Lorenzo de' Medici received a giraffe from Egypt, and other specimens were shown in Italy at this time. So, humanists like Angelo Poliziano, Antonio Constantius and other could compare what they saw to what they had read in Greek texts, edited and translated in Italy in the 15<sup>th</sup> Century, as Diodorus, Heliodorus, Oppian, Strabo and others, authors who give very good descriptions of the giraffe. So, at the end of the 15<sup>th</sup> Century, the giraffe and the *camelopardalis* are brought together as a unique zoological reality, through direct observation and philology.<sup>9</sup> So, when Gessner writes his *Historia animalium*, even if he probably had never saw a living giraffe, he could build his own description of the *camelopardalis* on recent and reliable written sources.

## The Giraffe in the Bible: A philological and zoological puzzle

The first topic of this article deals with the special interest of Gessner regarding the presence of the Giraffe in the Bible, in the Deuteronomy book, 14.5. In the Greek translation of the Bible, the Septuagint, the word *kamelopardalis* is used to translate an unknown animal, the *zemer*, which is considered, among other quadrupeds, as a clean and edible ruminant.<sup>10</sup> Here is the passage, from the Latin Bible (the text is from the *Commentarium biblicorum* by Konrad Pellikan)<sup>11</sup>:

14.4 Hoc est animal quod comedere debetis, bovem et ovem et capram,  
14.5 cervum et capream, bubalum, tragelaphum, pygargum, orygem, camelopardalum.  
14.6 Omne animal quod in duas partes findit ungulam et ruminat, comedetis.

These are the animals you may eat: the ox, the sheep, the goat,  
the deer, the gazelle, the roebuck, the wild goat, the ibex, the antelope, and the mountain sheep.  
[559] Every animal that parts the hoof and has the hoof cloven in two and chews the cud, among  
the animals, you may eat.<sup>12</sup>

This *zemer* is nowadays considered to be a kind of mountain goat, in the following of the protestant French scholar Samuel Bochart, who was the first in the 17<sup>th</sup> Century to demonstrate this identification, in his treatise on Bible animals, the *Hierozoicon*, published in 1663.<sup>13</sup> His method was mainly philological, comparing Hebrew and Arabic roots to eastern zoological medieval knowledge.<sup>14</sup>

There were many debates among humanists and theologians in the 16<sup>th</sup> Century about this identification of the *zemer*<sup>15</sup>. They have to choose between the fidelity to the Hebrew Bible and the authority of the Latin translation. In this context, Gessner was puzzled by the identification of the Hebrew zoonym *zemer* to the *camelopardalis*. At the beginning of

<sup>10</sup> Buquet (2006).

<sup>11</sup> Pellikan (1582), p. 18.

<sup>12</sup> Transl.: *Bible English Standard version*

<sup>13</sup> First edition Bochart (1663); I used the 18<sup>th</sup> Century edition: Bochart (1794), vol. 2, p. 273–279.

<sup>14</sup> Buquet (2006), p. 16–18.

<sup>15</sup> Buquet (2008), p. 62.

his description of the giraffe, Gessner makes his own philological enquiry on this translation problem, quoting Hebrew medieval scholars, namely Rabi Jonah and David Kimhi.<sup>16</sup> Gessner says that Jewish authors have sometimes translated *zemer* into “giraffe”, but others into *alces* (elk) or *rupicapra* (chamois). He finally concludes that the *zemer* was probably a giraffe, thus contradicting Luther’s German translation of the Old Testament, which renders the *zemer* into an “elend” (the elk, *Alces alces*).<sup>17</sup>

In his chapter on the elk (*De alce*), Gessner rejects some other Hebrew traditions that said, according to some Jewish Scholars, that the *zemer* is an elk or a mountain goat (*proinde non assentior Judæis illis, qui Deuteronomii cap 14 zemer alcen interpretantur: quamquam alii pro eadem rupicapram...*).<sup>18</sup> Gessner says that he prefers to acknowledge to the “giraffe” interpretation (*alii camelopardalin reddunt; mihi ad postremam animus magis inclinat*).<sup>19</sup> The arguments presented by Gessner are mainly geographic when refusing the hypothesis of the *alces*, as he mentions that elks and chamois are foreign to the Holy Land. Luther’s translation of the animal names in the Deuteronomy was guided by the purpose of edification of Northern and German people: so Luther used several animals of European origin: the elk, the chamois and the aurochs.<sup>20</sup> **[560]**

Gessner writes that the giraffe comes from Ethiopia, according to Antique and medieval sources, and not from the Near East... which is quite a contradiction, comparing this to his opinion about the elk, which cannot be identified as the *zemer* because of its northern origin.

Gessner is also puzzled by the fact that no one can say if the giraffe is edible or not, because this animal is very rare and exotic:

...nec obstat quod camelopardalin, nusquam in cibum venisse legerimus : rarita enim et peregrinitas facit ut cibo eam nemo experiatur.<sup>21</sup>  
(...which is not contradictory to the fact that we have never read anywhere that somebody has ever eaten its flesh; as it is a rare and foreign animal, nobody ever experienced eating it).

These reflexions given by Gessner on this topic are not surprising, if we consider the importance of Bible study in the 16<sup>th</sup> Century. Many translations are given at that time, in French, German or Italian, and they vary regarding the translation of the *zemer*, between giraffe, “camelopard” or chamois.<sup>22</sup> Konrad Pellikan, in his *Commentarium bibliorum* quoted earlier and published between 1532 and 1539, suggested in his commentary to translate the *camelopardalis* of the Latin Bible into *rupicolarum caprarum*, a mountain goat. Surprisingly, Pellikan does not use the same animal in his new translation of the Bible, published in Zürich in 1544, but uses *tarandus*, one of the Latin name for the elk.<sup>23</sup> Obviously, Pellikan uses here Luther’s list, and he gives a literal translation of the German zoonyms in Latin, keeping chamois, steinbock, unicorn and elk.<sup>24</sup> Even inside the

<sup>16</sup> Ibid., p. 61–62.

<sup>17</sup> Luther (1523), fol. 143v.

<sup>18</sup> Gessner seems to use Sebastian Munster’s translation of the Hebrew Bible in Latin (listed in Gessner’s sources, no 1). Munster translates *zemer* into *alces*: Munster (1546), p. 370. But Gessner does not give this source.

<sup>19</sup> Gessner (1551), p. 1.

<sup>20</sup> List of the animals translated by Luther: Ochsen (ox), *Schaff* (sheep), *Zigen* (goat), *Hirs* (deer), *Rehe* (roe deer), *Gemps* (chamois), *Steinbock* (bouquetin), *Eynhorn* (unicorn), Urochs (aurochs) und Elend (elk).

<sup>21</sup> Gessner (1551), p. 160.

<sup>22</sup> Buquet (2008), p. 62–63.

<sup>23</sup> Pellikan (1544), fol. 81.

<sup>24</sup> *Hoc est pecus quod quod comeditis, bovem, pecudem ovium, et pecudem caprarum, cervum, capream, ibicem, hircocervum, unicornem, urum et tarandum.*

production of a single author, one can find contradictions, reinforcing the idea that this translation was still very problematic in the 16<sup>th</sup> Century. It is rather striking that Konrad Gessner did not use the biblical studies and Konrad Pellikan's translation made at his time and in his city, and preferring to make his own philological enquiry, and finally choosing a hypothesis never adopted by any other Protestant biblical commentator.

## Gessner's sources about the giraffe

The second topic of this article is about Gessner's textual sources. On one hand, Gessner's account on the giraffe is the first complete compilation of Antique sources citing the *camelopardalis*; on the other hand, Gessner's use of medieval sources is rather scarce, in comparison to 15<sup>th</sup> and 16<sup>th</sup> Century humanists that he extensively quotes. Gessner cites 33 authors in this chapter: **[561]**

- 15 Antique Greek and Latin (in chronological order): Artemidorus Ephesus (the geographer), Strabo, Varro, Diodorus of Sicily, Horace, Pliny the Elder, Pausanias, Solinus, Dio Cassius, Oppian, Heliodorus of Emesa, the *Augustan History* (cited under the name of Julius Capitolinus), Florentinus, *Geoponici graeci* and saint Jerome.
- 2 medieval Jewish authors involved in biblical exegesis: Rabi Yonah (11<sup>th</sup> C.) and David Kimhi (13<sup>th</sup> C.).
- 5 medieval Latin and Greek: Thomas of Cantimpre<sup>25</sup>; Albertus Magnus, Marco Polo, "Quidam in descriptiones Terrae Sanctae"<sup>26</sup>, and Nikephoros Kallistos Xanthopoulos.
- 12 humanists (15<sup>th</sup> and 16<sup>th</sup> C., in chronological order, by date of birth): Poggio Bracciolini (as commentator of Diodorus), Niccolò Perotti (as editor of Pliny), Raffaello Maffei Volaterranus, Hermalao Barbaro (as editor of Pliny), Giovanni Battista Egnazio (Egnatius), Angelo Poliziano, Paolo Giovio, Julius Caesar Scaliger, Sebastian Münster, Petrus Gyllius (as editor and commentaror of Aelianus), Leo Africanus and Pierre Belon.

The medieval texts are only about 15% of the authors cited by Gessner, who gives more importance to classical and humanistic sources. One may speak of mistrust about medieval scholars; but, as a matter of fact, sources from the Middle Ages are rather scarce and give little information on the "true" giraffe.<sup>27</sup> On the contrary, Greek and Latin sources are more detailed, and the humanists are quite eloquent about the giraffe, since the arrival of several specimens in Italy at the end of the 15<sup>th</sup> Century, and they give good descriptions from direct observation, as Poliziano did with the giraffe given to Lorenzo de' Medici in 1487. Poliziano, in his *Liber miscellaneorum*, makes an important philological enquiry, comparing Greek and Latin antique sources about the *camelopardalis*, and identifying this Greek-Latin name to the vernacular "giraffa", its name in Italian.<sup>28</sup> Poliziano is a very important source for Gessner, as he cites the Florentine scholar 6 times in the chapter on the giraffe, both for his use of Classical sources and for the description he made from the direct observation of the animal.

<sup>25</sup> Thomas is quoted falsely under the name of Isidore of Seville, as we will explain later.

<sup>26</sup> See the last part of this paper about the iconography, for an identification of this author.

<sup>27</sup> *The camelopardalis* and the giraffe are considered as different animals in the Middle Ages. This absence of identification is obvious for example in medieval translations from Latin to vernacular languages. Buquet (2008), p. 58–60; Buquet (2012), p. 87.

<sup>28</sup> Poliziano (1971), p. 228–229.

Another important topic to discuss is the addition of sources after the first edition of the *Historia animalium*. When we compare the Froschauer edition of 1551 and the Frankfurt editions of 1603 and 1620, we can observe first that all text from the first edition has been kept and second that a few additions have been made in [562] the chapter about the giraffe.<sup>29</sup> The Frankfurt edition adds 6 authors, including 4 from the 16<sup>th</sup> Century: Leo Africanus (*Description of Africa*, first published in 1550); Paolo Giovio<sup>30</sup>; Julius Caesar Scaliger (*Exotericarum Exercitationum*) and Pierre Belon. The edition adds 2 medieval references: Marco Polo (under the name Paulus Venetus) and the byzantine Nikephoros Kallistos. With these additions, Gessner has chosen new sources with very good descriptions of the giraffe, which bring very accurate zoological observations. For example, Scaliger uses the travelog of Giosafat Barbaro (1413-1494), ambassador of Venice who travelled in Persia in 1471-1472. There he saw a giraffe at the court of the king of Persia among other exotic animals. Barbaro gives a lively description, quoted at length by Scaliger, with new information about the long violet tongue of the animal, and how the giraffe uses it to catch and eat leaves from the top of the trees.<sup>31</sup> None of the Antique, medieval and modern authors ever say a word about the giraffe's tongue, so Gessner saw the importance of this passage borrowed from Scaliger, to give a better description of the *camelopardalis*. Other facts brought by Leo Africanus and Paolo Giovio deals with its geographical origin and the ways of capturing the giraffe.

The addition of Scaliger, Paolo Giovio and Leo Africanus, forms a long paragraph of a dozen lines in the Frankfurt edition.<sup>32</sup> These pieces of information are the bigger addition on the chapter about the giraffe. This new paragraph has already been published in the very beginning of the chapter on the giraffe in the second edition of the *Icones animalium* published in Zürich in 1560, with exactly the same and extensive sequence of text.<sup>33</sup> As Gessner writes in the introduction of 1560, he wanted to shed light on new information, absent from the 1551 edition of the *Historia animalium*.<sup>34</sup> Unfortunately, Gessner didn't annotate the chapter on the giraffe in his personal exemplar.<sup>35</sup> The new paragraph is inserted in the middle of the chapter in the Frankfurt edition, with an extract from Nicephorus Callisthus. As Gessner doesn't use for the giraffe a formal structure as in other chapters,<sup>36</sup> [563] (information that is only concerned with the names of the giraffe, its geographical origin and its morphology) it is difficult to explain why he decided to place the text where he did. We can only observe that these quotations (including Nicephorus but excepting Scaliger) mention the geographic origin of the animal (African, Indian, sub-equatorial) and are inserted just after a quotation of Pausanias about the Indian origin of the *camelopardalis*. The additional paragraphs are inserted before a long paragraph telling the story of the giraffe given to Lorenzo da Medici, in correspondence to specimens

<sup>29</sup> Gessner (1620), p. 147–149.

<sup>30</sup> Gessner does not cite namely the book, only the author. Nevertheless, we can identify the quotation about the giraffe, borrowed from his *Historiarum sui tempis* I, book 18 (Firenze, 1550). We can find another mention of the giraffe of Lorenzo il Magnifico in the praise of the Egyptian sultan Qatbay in the *Elogia virorum bellica virtute illustrium* (ed. princeps Venice, 1546). In the first edition of the *Historia animalium*, Gessner cites only one book by Paolo Giovio, the *De piscibus*, among his sources (n° 218).

<sup>31</sup> Barbaro and Contarini (1873), p. 54.

<sup>32</sup> Gessner (1620), p. 148, l. 48–59.

<sup>33</sup> Gessner (1560), p. 41–42.

<sup>34</sup> In the first edition of the *Icones* (1553) there was no text with the engravings. For the second edition, Gessner chose to add "nomina & descriptiones", most of them new and absent in the *Historia animalium*. See Gessner (1560), introduction, p. 7.

<sup>35</sup> For a description of this book, see Leu, Keller, and Weidmann (2008), p. 130 (catalogue 159).

<sup>36</sup> Each chapter is structured in 8 parts, from A to H. See liminal chapter « Ordinis ratio, quem per singulas fere animalium historias secuti sumus ». See Pinon (2005), p. 248–249; Schmutz (2016), p. 130.

brought in Antique Rome. The only objective explanation is that we can observe that all the additional texts are inserted just before or after a paragraph mark (¶) of the first edition.

The very short reference to Belon about the giraffe's horns is quoted from *Les Observations de plusieurs singularitez et choses mémorables* published in 1553.<sup>37</sup> It is quite surprising that Gessner doesn't use for the second editions of the *Icones animalium* and the *Historia animalium* the rather detailed description of the animal by Belon, who saw living specimens in Cairo. As a matter of fact, Belon's description gives new information, and not only the quite accurate description of the horns: Belon explains that the animal is able to sit down, and needs to spread wide open its forelegs to graze on the ground.<sup>38</sup>

## Medieval sources

Albertus Magnus seems for Gessner his major medieval reference for animals, despite the fact that he is complaining about the "numerous errors" found in his zoological work,<sup>39</sup> and Gessner cites Agostino Nifo who said that Albertus' writings counted as many errors as words (*in numeris erroribus, inquinati, ita ut Niphus totidem fere errores in esse scribat quod verba*).<sup>40</sup> For the giraffe, Gessner cites Albertus 6 times, about the different names of the animal (*anabula*, *camelopardalis* and *oraflus*), the descriptions of the *camelopardalis* and the *oraflus*.<sup>41</sup> All 6 quotations come from Albertus' *De animalibus*. This zoological treatise is a commented paraphrase of Aristoteles' treaties on animals, with additional books, where species are classified by alphabetical order, mainly borrowed from Thomas of Cantimpré. Gessner seems to use mainly these last books and doesn't cite other passages of the paraphrase of Aristotle by Albert, where the last gives, in two passages, some little information not present in the final books: that the giraffe has a huge body, **[564]** which allows it to defend against predators, and that the anterior part of the body is highly elevated.<sup>42</sup> Albertus' zoological treatise has been edited since the last quarter of the 15<sup>th</sup> Century, and thus was easily available, but it doesn't seem that Gessner did possess in his own library one exemplar of this book.<sup>43</sup>

Another major source for medieval encyclopaedism on animals is the *Speculum naturale* by Vincent of Beauvais and Gessner mentions it in the list of authors used in the *Historia animalium*.<sup>44</sup> He sometimes quotes without ambiguity Vincent of Beauvais in the *Historia animalium*, but not about the giraffe. On the contrary, Gessner quotes Isidore of Seville about the *orasius* instead of the true medieval source, which we can identify at first glance as coming from Thomas of Cantimpré. Thomas of Cantimpré was unknown by name in the 16<sup>th</sup> Century. But some humanists know his encyclopaedia, the *Liber de natura rerum*,<sup>45</sup> dating from *circa* 1240. The humanist Petrus Candidus Decembrio re-edited the zoological part of this book under the title *De animantium naturis*, written

<sup>37</sup> Belon (1553).

<sup>38</sup> Belon (2004), p. 72–73 (chapt. 49).

<sup>39</sup> On the influence of Albertus on Renaissance natural history, see Glardon (2011), p. 33–39.

<sup>40</sup> Gessner (1551), no. 122. Cited by Glardon (2011), p. 34. Nifo (Niphus) is cited under the number 157 of the list of authors cited in the *Historia animalium*.

<sup>41</sup> Albert le Grand (1916), p. 1357 (*anabulla*), 1368 (*camelopardalis*), 1417 (*oraflus*).

<sup>42</sup> Albertus Magnus (1916), p. 889, 963.

<sup>43</sup> Gessner had a minor treatise of Albert, the *De Secretis mulierum*, but no other work. See Leu et al. (2008), p. 260.

<sup>44</sup> Gessner (1551), no. 139.

<sup>45</sup> See edition: Thomas de Cantimpré (1973). Mattia Cipriani is planning a new critical edition from his PhD (2014).

around 1458-1460, and kept in a unique manuscript.<sup>46</sup> Petrus Candidus says that the author of the original text was unknown to him. Gessner has probably never heard about Petrus Candidus, as he doesn't cite him in the list of sources of the *Historia animalium*, and because Gessner's passage on the *orasius* matches perfectly to the original Thomas text, and not to the rewriting by Petrus Candidus, who reviewed the Latin original medieval text. It's difficult to say if Gessner had been in contact with one of Thomas' manuscripts, and the *Liber de natura rerum* remained unpublished until the 20<sup>th</sup> Century. On the one hand, many manuscripts of the *Liber de natura rerum* were in circulation in central Europe at the end of the Middle Ages; on the other hand it was the third version of the text (Thomas III) which has the greater diffusion in Austria and southern Germany,<sup>47</sup> and this third version has no entry for *oraflus* or *orasius*, neither for *camelopardalis*,<sup>48</sup> and Gessner's text refer explicitly to this zoonym in the quotation of Isidore/Thomas.

To evaluate the use of the use of medieval encyclopaedists in the *Historia animalium*, we can also consider the way Gessner cites Thomas as part of his medieval sources in the preface of his *De quadrupedibus*: [565]

Liber de natura rerum authoris innominati, passim apud recentiores illos, quorum impurus sermo latinus est, citatur, Vincentium, Albertum, ex quibus nos omnia quae non prorsus absurda erant mutuati sumus.<sup>49</sup>

*Liber de natura rerum*, from an unnamed author, quoted in various passages by the more recent Vincent and Albert, in a corrupted Latin language, from which we borrowed all that what was not totally absurd.

The end of the sentence confirms that Gessner doesn't often quote directly Thomas of Cantimpré, but mainly through Albertus Magnus or Vincent of Beauvais.<sup>50</sup>

When Gessner cites some obscure authors (*alli quidam obscure authores*)<sup>51</sup> about the *anabulla*, does he include Thomas of Cantimpré? An important clue is that Gessner could have only cited the title, *Liber rerum* or *Liber de natura rerum*. But he does not cite the information about the giraffe. Thus, the best hypothesis is that Gessner quotes for this extract Vincent of Beauvais' *Speculum naturale*. Gessner cites first "Isidorus" about the "nabun", a name given to Pliny to the giraffe, and second about the *orasius*. Vincent's account on the *orasius* is directly borrowed from Thomas of Cantimpré's *oraflus* and matches perfectly to Gessner's quote; the mention of "nabun" is taken from the chapter on *camelopardalis* by Vincent, and the last quotes Isidorus as his main source for this animal (in the rubric of the chapter) and Pliny inside the text.<sup>52</sup> Gessner cites the source of Vincent (Isidorus) for the "nabun", and makes a mistake in quoting Isidorus for the *orasius*, where Vincent quoted the *Liber de natura rerum* (Thomas) when writing about this animal.<sup>53</sup>

<sup>46</sup> *De animantium naturis* (15-16<sup>th</sup> Century) Biblioteca apostolica Vaticana, urb. lat 276; Pyle (1984); Pyle (1996).

<sup>47</sup> Van Den Abeele (2008), p. 151–152.

<sup>48</sup> Thomas de Cantimpré (1992). We refer to a work-in-progress edition of the text, based on 5 manuscripts, still unpublished. The new edition project, based on 23 manuscripts, is forthcoming at Wiesbaden, Reichert Verlag, WILMA series (see <http://fordoc.ku-eichstaett.de/1701/>).

<sup>49</sup> Gessner (1551), no. 139 and 140.

<sup>50</sup> For other references to Thomas in the ornithological book of Gessner, see the contribution of B. Van den Abeele in the current proceedings. Van den Abeele also mentions that references to Thomas by Gessner mainly come from Vincent of Beauvais.

<sup>51</sup> Gesner (1551), p. 162, l. 31.

<sup>52</sup> Edition used: Vincent de Beauvais (1476), without pagination.

<sup>53</sup> Vincent de Beauvais (1624), cols 1385 (*anabulla*), 1387–1388 (*camelopardus*) 1435 (*orasius*).

We can consider that Gessner cites Vincent's encyclopaedia instead of Thomas, because he uses the zoonym *orasius*, where Thomas uses *oraflus*. The change of "fl" to "si" in the middle of the world is specific to the editions of Vincent of Beauvais' *Speculum naturalis*. There is also minor difference between Thomas's text and Vincent's quotation: in the first sentence of the chapter, Thomas says that the *oraflus* is an extraordinary animal, about which Nature had given such beauty in its colours that it makes him superior to every animal. This first sentence has not been kept by Vincent, and nor in Gessner's chapter. All Gessner's text matches perfectly to Vincent, even in the order of words (that Vincent slightly modified from Thomas's text), apart from a sentence not kept by Gessner, saying that the *oraflus* seems to be conscious of his own beauty, and when he sees men standing around him, he turns around on all sides, drawing everyone's eyes to admire him. Gessner doesn't keep this passage from Vincent, preferring to quote Albertus, who cited Thomas for the same passage, [566] rewriting it in a shorter form. Gessner also mentions that Albertus gives better information about the colours of the giraffe, saying that among the various colours of the hide, red and white are the most frequent. So Gessner selects the quotations among his sources, thus avoiding repetition.

It is striking that Gessner does not cite Bartolomeus Anglicus, another famous medieval encyclopaedist from the 13<sup>th</sup> Century, which had a great diffusion not only in medieval manuscripts but also in printed editions (more than forty until the beginning of the 17<sup>th</sup> C.)<sup>54</sup>, in Latin and in various vernacular translations.<sup>55</sup> Although Bartholomeus is cited among the authors used in the *Historia animalium*,<sup>56</sup> Gessner doesn't cite this source for his description of the giraffe. It is not so surprising if we consider that Bartholomeus has only compiled Pliny, Isidore and the *Glossia ordinaria* of the Latin Bible about the *camelopardalis*.<sup>57</sup> Bartholomeus doesn't mention the other names of the giraffe, *anabulla* nor *oraflus*. On the contrary, Thomas, Vincent and Albertus bring new information and better descriptions of the animal that was seen at their time in Europe. Thus, they add up-to-date knowledge on the giraffe, alternative and complementary to Classical sources. On the opposite side, Bartholomeus didn't bring any novelty, so Gessner maybe prefers not to add some superfluous and repetitive information.

Gessner also sourced accounts from medieval pilgrims and travellers including Marco Polo and an anonymous pilgrimage travelogue (*Quidam in Terrae sanctae*). I will discuss the latter when I consider the illustrations. Marco Polo is only cited in the Frankfort edition from the beginning of the 16<sup>th</sup> Century; the addition is rather short, simply mentioning that giraffe are found in "Abasia" (Abyssinia). One important point to emphasize is that Gessner does not use medieval travel accounts, except Marco Polo and the anonymous pilgrim. I have found in more than 30 medieval pilgrim travelogues quite accurate descriptions of the giraffe and other exotic animals seen in the Holy Land, in Egyptian landscapes or at the Sultan's menagerie in Cairo.<sup>58</sup> Gessner might have found good anatomical details in these texts; but most of these travelogues remain unpublished in the 16<sup>th</sup> Century, and we know that Renaissance scholars were quite wary and suspicious about medieval imagination and their taste for monsters and *mirabilia*. They preferred to rely on modern testimonies published or sent by Humanists whom they could trust.

<sup>58</sup> Buquet (2013).

Apart from Marco Polo, we find a new author, Nicephorus Callisthus Xanthopoulos, a 14<sup>th</sup> Century Byzantine priest who wrote a *Historia ecclesiastica*. Gessner quotes a passage about the giraffe from this work, where Nicephorus mentions the origin of the giraffe (*sub aequinoctiali ad orientem et meridiem*) and gives an [567] external description. The *Historia ecclesiastica* was translated into Latin by Johannes Langus and was edited in Basel in 1553,<sup>59</sup> just after the first edition of Gessner's *Historia animalium*. Just before, the first Latin translation was edited in an anthology in Basel in 1535. This text was, however, probably unknown to Gessner as he does not mention Nicephorus in the first edition of the *Historia animalium*. Nicephorus' *Historia ecclesiastica* had a great editorial success during the 15<sup>th</sup> and the 16<sup>th</sup> Century. It was published in dozens of editions.<sup>60</sup>

The last and bigger addition on the giraffe in the second edition of the *Historia animalium* is found at the end of the chapter. It is dedicated to images of the giraffe that I will now discuss in more detail.

## Illustrating the giraffe in four editions

In the first editions of the *Historia animalium* (1551) and of the *Icones animalium* (1553), there is only one engraving to illustrate the giraffe, the same one for each book. The picture shows a quadruped with a spotted hide, short hind legs, and two big curved horns (**fig. 1**).

Gessner uses two images to illustrate the giraffe in the second editions of the *Icones animalium*, and we can find the same two pictures in the second edition of the *Historia animalium* from the 16<sup>th</sup> century. Gessner adds a new picture (**fig. 2**) in the additions of the second edition of his *Icones animalium*, explaining that it is a better image than the one shown in the first edition and reprinted in the main part of the book (*Icon accuratior quam exhibita supra pag. 41*).<sup>61</sup> Urs B. Leu studied the story of the second image and its origin. The picture was inspired by a woodcut from a drawing by Melchior Lorichs (Lorck). Lorichs travelled to Constantinople between 1555 and 1559 as an art adviser of the Flemish diplomat Ogier Ghislain de Busbecq, and he made there many pictures (people, views of the city, various curiosities). He drew also an image of a giraffe send as present to the Ottoman sultan, Suleiman the Magnificent. Later, this picture will be printed by Hans Adam in Nuremberg (**fig. 3**).<sup>62</sup> This is confirmed by Gessner himself in the *Icones animalium*, as he writes that the picture was printed in Nuremberg from a drawing by Melchior Luorig, from a living model given to the great Turk emperor in Constantinople; the picture was send by some friend in Germany:

*...diligenter et probes depictum per Melchiorum Luorig Constantinopoli (ubi Turcarum imperatori hoc animal donatum fuit) et amico cuidam in Germaniam transmissum, anno Salutiferi partes M.D.LIX.)*<sup>63</sup>

<sup>59</sup> Nicephorus Callistus Xanthopoulos (1553).

<sup>63</sup> Gessner (1560), p. 124–125.

Figure 1.

[569]

Figure 2

Figure 3

The image was printed in 1559, short before the second edition of the *Icones animalium* (1560): this could explain why this picture has been rejected at the end of the

volume, being part of the *Additiones*, and not replacing the “Breydenbach” picture in the main part of the book. The first image (p. 42, **fig. 4**), comes with a caption:

Figure 4

Cameli Indicae iconem hanc mutuati sumus olim ex libro quodam typis impresso inominati authoris qui Terram sanctam Italice descripsit. **Aliam meliorem quaeres in fine huius libri.**

This image of the “Indian camel” was borrowed some time ago from the book of an unnamed Italian author, who described the Holy Land. You will find another better one at the end of this book.

[571] The “better image” is without any doubt more accurate, although it doesn’t represent the pattern of the hide’s colours: the horns are more naturalistic than in the Reuwich picture, as is the tail longer, and more realistic. We’ll try to understand why this image was used despite the fact that Gessner was conscious of its poor quality. The engraving was inspired by a woodcut by the Dutch artist Erhard Reuwich (**fig. 5**), illustrating the edition of the travels of Bernard Breydenbach (ed. princeps Mainz 1486). As a matter of fact, some engravings of the *Historia animalium* were copied from the iconic woodcut of Breydenbach’s *Travels* edition, gathering various animals seen in Egypt and the Holy land by the pilgrim: giraffe, wild man, salamander, camel and Indian goats.<sup>64</sup> However, what at first glance appears obvious is much more complex as we shall see.

In the caption of the *Icones* (**fig. 4**), Gessner mentions an anonymous Italian travel as being the source of this image, which doesn’t fit with the Breydenbach travels. Among various Italian pilgrimages of the end of the Middle Ages and the 16<sup>th</sup> Century, I can identify this anonymous travel through the Holy land, Syria and Egypt as the *Viaggio da Venezia al san Sepulchro*.<sup>65</sup> The *Viaggio* has been printed many times during the 16<sup>th</sup> century (14 before 1550) in many different versions for a total of about 60 editions until the 18<sup>th</sup> Century. In the 17<sup>th</sup> century, it was published under the name of Noe Bianchi (or Bianco), a false authorship, borrowed from another successful pilgrimage guide from the

<sup>64</sup> Kusukawa (2010), p. 308, 324, 326–327.

<sup>65</sup> *Contra* Kusukawa (2010), p. 309 note 36, who assumes that the image of the ‘camel-giraffe’ of the *Icones animalium* comes from an Italian version of Breydenbach’s travels.

16<sup>th</sup> century. Jean-Luc Nardone and Kathlyn Moore have shown how complex is the history of these editions, and that the main source for the *Viaggio* is a travel account about the Holy Land written by Niccolo da Poggibonsi in the 14<sup>th</sup> century.<sup>66</sup> Although the text of the *Viaggio da Venezia* varies in many passages in the different editions, the chapter describing animals in Egypt is always kept in the same form, with absolutely no changes in the text. There are also no major changes in the illustrations of the giraffe in the *Viaggio*. As you can see in the **fig. 6**, the picture of the giraffe is different from Reuwich's image.<sup>67</sup> An explanation for this difference can be found in Gessner's text, both in the first and second editions of the *Historia animalium*:

Quidam in descriptiones Terrae Sanctae, ex qua etiam hanc imaginem mutuati sumus, girapham caprae comparat, et pellem eius in ventre piscatorio reti, ob virgulas nimirum cancellatim digestas. [quod in pictura nostra expressum non est ].

Somebody, in the descriptions of the Holy Land, from which we borrowed this picture, had compared the giraffe to a goat, its hide on the belly to a fishing net, certainly because of the little branches divided in lattice [which is not represented in our picture].

[572]

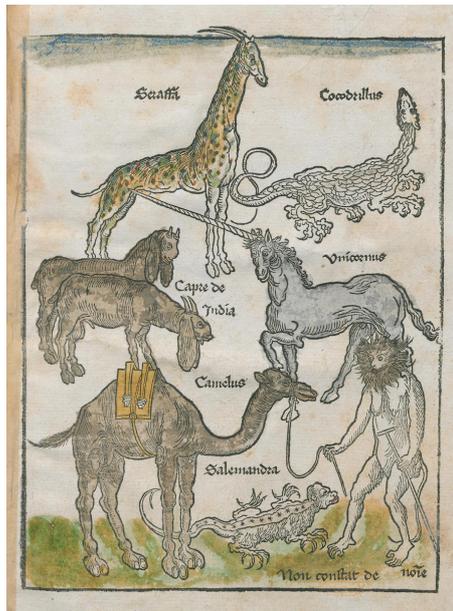

Figure 5

[573]

<sup>66</sup> Moore (2013); Nardone (2015); Nardone (2007), p. 13–14.

<sup>67</sup> Nardone (2006).

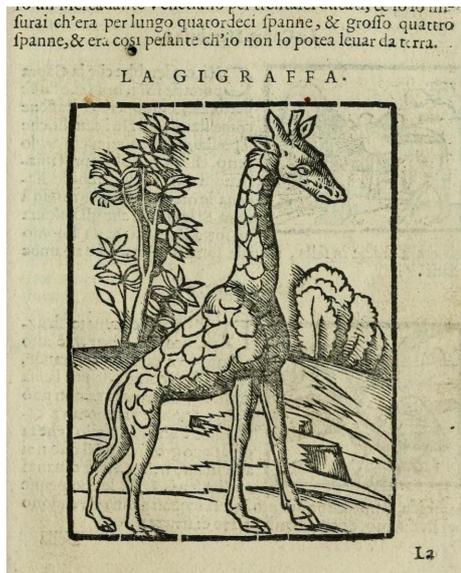

Figure 6

“Quidam in descriptions Terrae Sanctae” is Gessner’s textual source, the anonymous *Viaggio*, inspired by Niccola da Poggibonsi’s travels. The passage *ex qua etiam hanc imaginem...* is quite puzzling: the image of the *Historia animalium* does not, however, resemble the images from the *Viaggio da Venezia* edition. Gessner says that the giraffe is similar to a goat while the fur of its belly looks like a fishing net. These two elements allow [574] to identify Gessner’s source. First, among the 50 medieval sources on giraffes that I have studied, Poggibonsi’s is the only one to compare the giraffe to a goat; second, Poggibonsi is also the only one to compare the pattern of a giraffe’s hide to a fishing net. This similarity cannot be a coincidence. Here is the beginning of Poggibonsi’s description of the giraffe:<sup>68</sup>

La giraffa si è fatta quasi come la capra, e il corpo suo è colorato di sotto come le rette...

The giraffe is almost made as a goat, and the body is coloured underneath like a net...

Thus, Gessner’s source is identified as Poggibonsi’s text and we shall assume that Gessner probably used the printed version of this text, published under the title of *Viaggio da Venezia*. One passage by Gessner (*ob virgulas nimirum...*) is not found in Poggibonsi’s text, nor can it be found in the printed editions of the *Viaggio*. In fact, Gessner seems to be describing the picture in a 16<sup>th</sup> Century edition of the *Viaggio*. As you can see in the **fig. 6**, the semi-circular lines on the belly symbolize the net patterning of the skin. *Virgulatum* means “striped”, but *virgula* means also “line” or “twig” or “little branch”. In modern French, “virgule” means “comma”, the punctuation mark, and this meaning is attested in French in the 16<sup>th</sup> century. The semi-circular rounded lines on the belly of the picture here may be compared to “commas”. This description of the “virgulas” is the major clue to explain that Gessner wanted to print the *Viaggio* picture, as no stripped nor net pattern can be seen in the design of the giraffe’s hide on the Reuwich-Breydenbach image.

The end of the sentence, between brackets (*quod in pictura nostra...*), is an addition from the edition of Frankfort, dating from the beginning of the 17<sup>th</sup> century. Here, somebody (probably the editor of the text after Gessner’s death) was obliged to mention that this “virgulas”, commas or twigs alike, could not be seen on both pictures printed in the *Historia animalium*.

<sup>68</sup> Poggibonsi (1945), p. 108; Nardone (2006), para. 3.

It appears that a mistake occurred during the printing of the first edition of the *Historia animalium*. Gessner probably saw with his own eyes the woodcut from the *Viaggio da Venezia*. In all likelihood he had planned to print this image. For an unknown reason, however, the engraving that was eventually printed was inspired by the zoological woodcut found in Breydenbach's *Peregrinationes in terram sanctam*. Edward Reuwich, who travelled with Bernhard Breydenbach, designed this woodcut. The Reuwich's picture (**fig. 4 & 5**) shows a giraffe with long, rounded and curved horns like a cow or a goat, which is not the case for the *Viaggio's* picture.

Breydenbach's travelogue had become very famous since its first edition was published in 1486. The image of the giraffe, inspired by Reuwich's woodcut, was to have great success in the 16<sup>th</sup> Century, used as a model for illustrating the editions of Arnold Van Harff (*Pilgelfahrt*, 1500),<sup>69</sup> Michael Herr (*Das neue Tierbuch*, 1546),<sup>70</sup> [575] and Barthelemy Aneau (*Décades*, 1549).<sup>71</sup> Despite the very poor quality of this picture, in comparison to many others dating from the 16<sup>th</sup> Century, this image was to become quite iconic in the Renaissance. The other point, already mentioned earlier, is that Gessner uses for several different animals the Reuwich's woodcut: it seems obvious that it was easier to reuse this model than searching for another one.

This explanation is reinforced by the fact that some editions of the *Viaggio*, published after 1518, which were originally illustrated with original pictures since the *editio princeps* (Bologna 1500), used sometimes some woodcuts copied from Breydenbach's *Peregrinatio*.<sup>72</sup> In the *Viaggio*, three woodcuts come within a general presentation of the city of Damietta.<sup>73</sup> The first with a caption *Questo è il gambello il quale porta le some degli Mori* (this is the camel which carry the burden of the Arabs) shows a savage man holding the leash of a camel, matching perfectly to the model of the Breydenbach engraving. The second presents four animals, "babuino", "cocodrilo", "unicornus" and "salamandra", gathered in one engraving (**fig. 7**), also inspired by the same woodcut; for example the edition of Venezia 1519 (Paris BnF exemplar) doesn't have the woodcut of the camel, but contains the four-animals engraving.<sup>74</sup> The third is a picture of two goats, one with long ears, the other with a large tail, these two alike the "capre de India" of the Breydenbach woodcut. As all the animals are identified by their captions in the Breydenbach illustration, the same method is used in the second of the three woodcuts of the *Viaggio*.<sup>75</sup> Lamberto Donati have already observed that, in this iconographic program based on the Breydenbach woodcut, the editor of the *Viaggio* chose to copy all the animals except the giraffe. Donati submitted the hypothesis that probably the Venetian publisher was not satisfied with the poor quality of the giraffe woodcut, as he may have seen better paintings of this animal in Italy, especially those of Bellini in Venice.<sup>76</sup>

It is also surprising that Gessner didn't chose to reuse the nice picture of the giraffe in Belon's book that have been made from nature ("*Et l'ayant fait retirer au naturel, en avons bien voulu ici suivant mettre le portrait*").<sup>77</sup> Pictures given by Belon and Thevet are better than those chose by Gessner, both Reuwich's and Luorich's. It's thus puzzling to

understand why Gessner didn't choose the illustrations of the French naturalists,<sup>78</sup> or any other of that time.<sup>79</sup> Gessner seems to have not heard [576]

Figure 7

of the various sketches and paintings involving giraffes drawn from nature that were produced in Italy at the end of the 15<sup>th</sup> Century: he may have found among them very beautiful portraits of true giraffes,<sup>80</sup> but very few of these pictures have been printed. One is found in a manuscript of the *Historia senense* by Sigismondo Tizio, dating from the beginning of the 16<sup>th</sup> Century.<sup>81</sup> Lorenzo da Medici's giraffe had also inspired another woodcut, designed by Niklaus Stoer, and printed in Nuremberg in 1529 by Wolfgang Resch.<sup>82</sup> [577]

## An iconographic epilogue by Teodoro Ghisi

The "Breydenbach" model has been used at the end of the 16<sup>th</sup> Century by the Italian painter Teodoro Ghisi (d. 1601) in his illustration in the manuscript of Petrus Candidus in the chapter dedicated to the "camelopardalis" (f. 14v). In this manuscript (Biblioteca apostolica Vaticana, Urb. Lat 276), written in 1460, but illustrated at the end of the 16<sup>th</sup> Century,<sup>83</sup> Ghisi copies many engravings from Gessner's books, mainly the edition of the *Icones animalium* from 1560 and the fifth volume of the *Historia animalium*, published by Froschauer in 1587.<sup>84</sup>

As you can see in the **fig. 8**, one anonymous hand (a reader? the owner of the manuscript?) wrote near the picture (f. 14v), the word "capra" or goat. Here, you can see the same equivalence being made between giraffe and goat in the *Viaggio*, here probably because of the long rounded and sharp horns created by Edward Reuwich.

<sup>78</sup> The question of better quality of Belon's and Thevet's pictures had already been posed by Leu (1993), p. 72–73.

<sup>79</sup> For a study on the first pictures of giraffe at the Renaissance, see Fischer (1974).

<sup>81</sup> Donati (1938).

<sup>82</sup> Cuttler (1991), p. 170; Donati (1938), p. 258–259.

<sup>83</sup> Pyle (1996), p. 268.

<sup>84</sup> *Ibid.*, p. 304.

Figure 8

[578]

Figure 9

In another chapter describing the giraffe by the name of *oraflus* (f. 46v, **fig. 9**), Ghisi uses another iconographic model, which looks like a true giraffe — probably the one by Melchior Luorig. Despite the odd name given to the animal, the anonymous hand wrote “girafa” near the image since the writer obviously recognized the animal by name as well. This confusion between giraffe and goat in Ghisi’s picture of the *camelopardalis* could thus explain why the editor of the *Historia animalium* preferred to use the Breydenbach-Reuwich image rather than the *Viaggio* woodcut simply because Reuwich’s image looks like a goat, with its long sharp horns, rather than a giraffe.

## Concluding remarks

As already mentioned in the introduction of this article, Gessner’s chapter on the giraffe is a very important step in the history of this exotic and rare animal. Gessner gathered here a rather exhaustive compilation of what have been written on the *camelopardalis* from the Antiquity to the 16<sup>th</sup> Century, confronting Classical and Medieval sources, and selecting up-to-date information in his contemporaries’ works. He was [579] the first zoo-historian to oppose different views about the translation of the *zemer* in the Deuteronomy book, using medieval Jewish scholars’ works, and giving his personal view (that the *zemer*

is a giraffe), in opposition of many commentators and translators of the Bible, among them Luther.

Gessner's large compilation of sources about the giraffe doesn't neglect medieval authors. The information borrowed from Nicephorus Callisthus, Marco Polo, Niccola da Poggibonsi, Albertus Magnus, Vincent of Beauvais are chosen with great care, giving new descriptions and new facts (naming, geographic origin) about the animal, complementary to the Classical sources, and even to Gessner's contemporaries.

Gessner consciously adds new information to the second edition of the *Icones animalium*, that will be inserted in the second *post mortem* edition of the *Historia animalium*, quoting some contemporary authors, Scaliger, Paolo Giovio and Leo Africanus, coming with Nicephorus Callisthus.

Gessner's major concern about the quality of the illustrations of the animals was betrayed by some mistake in the choice of the giraffe woodcut. Initially taken from the *Viaggio da Venezia al san Sepulchro*, the image was finally copied from a woodcut by E. Reuwich, which illustrated the *Travels* of Bernhard von Breydenbach to the Holy Land. There was a confusion between two pilgrimage travelogues, as Breydenbach picture grouping various animal of the Holy land and Egypt has been used in Gessner's *Historia animalium*, as in various books in the 16<sup>th</sup> Century. This mistake will be still present in the second editions of the *Icones* and the *Historia animalium*, but with the addition of a new and contemporary image by Melchior Lorichs, printed shortly after its realization in Constantinople at the end of the 1550's. The Lorichs woodcut will definitively replace the "original" picture from the *Viaggio*, which has never been printed in Gessner's edition. The major contribution of this article is to shed light on this "ghost picture", seen and chosen by Gessner.
